

Statement of Work (SOW)

SWUK Central Submissions Rollout – UK Region

This Statement of Work (SOW) defines the scope, deliverables, responsibilities, and commercial terms for the implementation of the SWUK Central Submissions solution across the UK Region, following the successful Proof of Concept.

1. Project Overview

Following the successful Proof of Concept, this Statement of Work covers the **implementation of the Central Submissions solution across all remaining UK plants**, using the validated SharePoint and Power Automate architecture.

The solution enables **consistent plant-level submission, centralized consolidation, and strong governance**, while allowing the UK Shared Services Finance Team to operate and extend the solution independently over time.

2. Objectives

- Deploy the standardized central submission solution approach just for the Prepayment Request control for all UK plants, further controls like bad debt, paper provisions & spares provisions for SOX sites will be configured later.
- Refactor and harden the existing Prepayment Request data consolidation power automate flow for processing UK plants pending Prepayment Request data and UK regional users to automatically see consolidated data for processing.
- Implement plant-level security model for all UK plants to ensure Prepayment Request data access security for authorized members.
- Create and deploy a Plant Template Page and use It to create a dedicated plant page instance for each plant in the UK region.
- Enable UK Shared Services Finance Team to self-manage and extend the solution.

3. Scope of Work

3.1 Security Groups

Dedicated SharePoint security groups will be created per plant following the convention [Plant Code] Members. Permissions will be applied to ensure read-only access at the site level and controlled contribution at item level.

3.1.1 Security Groups

- Create dedicated SharePoint security groups per plant
Naming convention: [Plant Code] Members

- ABE Members – Excluded from scope.
- NOC Members
- WEA Members
- SBG Members
- MLD Members
- NHN Members
- MAR Members
- YTE Members
- WSM Members
- DIS Members
- CPD Members
- MKV Members
- BCN Members
- ATL Members
- TAN Members
- CHF Members
- WHT Members
- GOP Members
- CPT Members
- CLP Members
- DUK Members
- CFP Members
- MSM Members
- HOX Members
- Configure permissions:
 - Read access at the site level
 - Contribute (No Views No Versions) at item level
- Validate that plant users can only access their own data.

3.2 Prepayment Request Lists

A Prepayment Request list will be created and configured for each UK plant using the already created and approved Prepayment Item Content Type located in the GBR-UK-Shared-Services SharePoint site, including calculated Processed logic and standard views.

- Create a Prepayment Request list using the approved **Prepayment Item Content Type**
- Configure:
 - Default Plant & metadata columns

Field Name	Field Type	Requirement	Content Type
Bus Area	Choice	Required	Prepayment Item

Cost Centre	Single line of text	Optional	Prepayment Item
Date From	Date and Time	Optional	Prepayment Item
Date To	Date and Time	Optional	Prepayment Item
GL	Single line of text	Optional	Prepayment Item
Invoice Number	Single line of text	Required	Prepayment Item
Invoice Value	Currency	Required	Prepayment Item
PO	Single line of text	Required	Prepayment Item
Rationale for Prepayment	Multiple lines of text	Optional	Prepayment Item
Vendor Name	Single line of text	Optional	Prepayment Item
Vendor Number	Single line of text	Optional	Prepayment Item
Plant	Single line of text	Optional	Prepayment Item
Processed On	Date and Time	Hidden	Prepayment Item
Timestamp	Single line of text	Hidden	Item
Description Details	Multiple lines of text	Required	Prepayment Item
Attachments	Attachments	Optional	Item
Processed	Calculated		Item

- Calculated **Processed** column
 - =IF(ISBLANK(Timestamp),"No","Yes")
- Standard **Pending** and **Processed** views
 - Pending

Filter

Show all of the items in this view, or display a subset of the items by using filters. To filter on a column based on the current date or the current user of the site, type **[Today]** or **[Me]** as the column value. Use indexed columns in the first clause in order to speed up your view. Filters are particularly important for lists containing 5,000 or more items because they allow you to work with large lists more efficiently. [Learn about filtering items.](#)

☐ Show all items in this view
☒ Show items only when the following is true:

Show the items when column

Processed

is equal to

No

- Processed

Filter

Show all of the items in this view, or display a subset of the items by using filters. To filter on a column based on the current date or the current user of the site, type **[Today]** or **[Me]** as the column value. Use indexed columns in the first clause in order to speed up your view. Filters are particularly important for lists containing 5,000 or more items because they allow you to work with large lists more efficiently. [Learn about filtering items.](#)

☐  Show all items in this view

☒  Show items only when the following is true:

Show the items when column

Processed

is equal to

Yes

- Break permission inheritance
- Apply plant-level permissions
- Validate submission and restriction behavior

3.3 Plant Master List

The Plant Master List will serve as the configuration layer driving automation and plant discovery for the consolidation process.

- Register each plant with:
 - Plant identifier
 - BE - POC Excluded
 - NOC
 - WEA
 - SBG
 - MLD
 - NHN
 - MAR
 - YTE
 - WSM
 - DIS
 - CPD
 - MKV
 - BCN
 - ATL
 - TAN
 - CHF
 - WHT
 - GOP
 - CPT
 - CLP
 - DUK
 - CFP
 - MSM
 - HOX
 - Central Submissions list name
 - Associated plant security Group Id

- Validate automation readiness for all entries

3.4 Power Automate Consolidation

The consolidation flow will be adjusted to dynamically process all UK plants and seal processed items to ensure data integrity. This flow will be triggered by the UK Shared Services Finance Managers on a monthly basis.

- Refactor the existing consolidation flow to:
 - Dynamically process all UK plants listed in the Plant Master List
 - Eliminate hardcoded dependencies
- Validate:
 - Retrieval of unprocessed plant items
 - Accurate creation of master records
 - Automatic sealing (read-only) of processed items

3.5 Plant Template Page & Navigation

A single Plant Template Page will be created and reused to deploy individual plant pages, with navigation configured for consistent access.

- Create **one reusable Plant Page template**
- Deploying a Site Page per plant
- Configure:
 - Prepayment Request link to access the list
- Update site navigation for consistent plant discovery

3.6 Testing & Knowledge Transfer

Functional testing, end-to-end validation, and knowledge transfer sessions will be conducted to enable UK Shared Services Finance ownership.

- Plant-level functional testing
- End-to-end consolidation testing
- Issue remediation and stakeholder sign-off

3.7 Knowledge Transfer & Enablement

- Produce documentation covering:
 - Plant onboarding steps
 - Identify existing content types and site columns
 - Create a new content type & site column, re-use existing site columns
 - Create and configure a plant list
 - Secure the list
 - Add content types
 - Configure views
 - Create and configure a master list

- Secure the list
 - Add content types
 - Configure views
- Consolidation flow operation
 - Backup existing Prepayment Request data consolidation power automate flow
 - Create a new instance of the Prepayment Request data consolidation power automate flow and enhance it to work with the new mater list
 - Troubleshoot and testing of Power Automate Flows
- Deliver a **knowledge transfer session** for Finance:
 - Plant onboarding
 - Monitoring and operating the flow
 - Reuse of the approach for future Finance controls

4. Effort, Commercials & Chargeback Model

4.1 Effort Model (Per Plant)

Activity	Estimated Effort
Security group setup	0.5 hrs
Prepayment Request list creation & configuration	1.5 hrs
Permissions & validation	0.5 hrs
Plant page deployment	0.5 hrs
Testing & fixes	1.0 hrs

Estimated per plant: 4 hours

4.2 Total Plant Rollout Effort

- 23 plants × 4 hours = **92 hours**

4.3 One-Time Regional Effort

Activity	Effort
Power Automate refactoring & hardening	12 hrs
Plant Page template & navigation finalization	6 hrs
End-to-end testing	8 hrs
Knowledge transfer & documentation	10 hrs

One-time effort: 36 hours

Plants to onboard: 23 (POC plant excluded)

Category	Hours
Plant rollout (27 × 4 hrs)	92
One-time regional activities	36
Total Estimated Effort	128 hours

5.2 Digital Productivity Team Chargeback Model

- **Delivery Model:** Remote / On Site if needed
- **Billing Model:** Time & materials (chargeback)
- **Standard Rate:** \$80.77 Euros per hour

5.3 Commercial

Item	Hours	Rate	Total
Plant rollout	92	\$80.77	\$7,430.84
Regional setup & KT	36	\$80.77	\$2,907.72
Total Project Cost	128		\$10,338.56 EU

6. Dependencies

The following dependencies are required for successful delivery:

- Dedicated Microsoft 365 service account for the UK Division
 - Used for Power Automate ownership
 - Ensures continuity, auditability, and supportability
- Timely access to:
 - SharePoint site administration
- Availability of Finance stakeholders for validation and sign-off

Failure to meet dependencies may impact delivery timelines.

9. Out of Scope

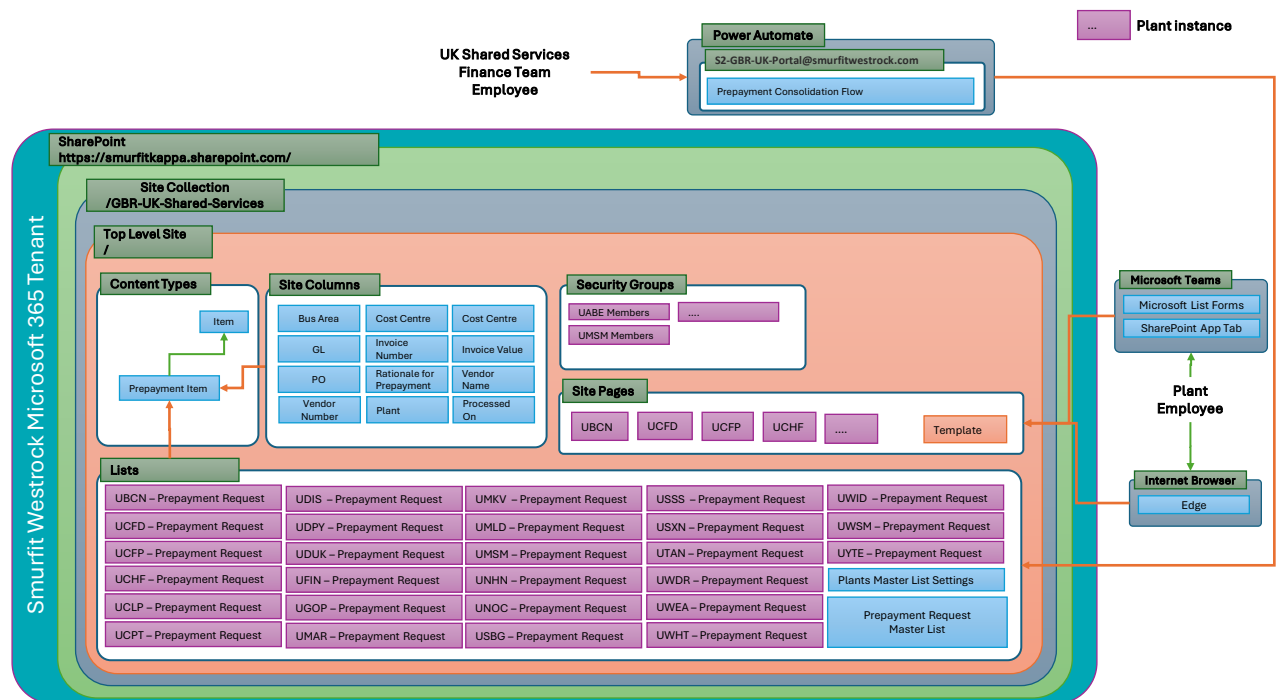

- Document management libraries or Document Sets
- ERP / SAP integration
- Power BI dashboards
- Historical data migration
- Custom Power Apps UI
- Non-UK rollout
- Ongoing support beyond agreed model

Solution Architecture

The Central Submissions solution is composed of **five core components**, each with a clear responsibility. Together, they provide a controlled, scalable, and reusable approach for UK-wide financial process automation.

Each plant submits Prepayment Request through its own controlled list, those requests are automatically consolidated into a central dataset via Power Automate, and everything is governed by a configuration-driven security and onboarding model.

The same architecture can be reused for other Finance controls by changing the content type and consolidation logic, without redesigning the platform.

1. [Plant] Central Submissions Lists

Purpose

Provide each UK plant with a **dedicated, controlled submission area** for Prepayment Request.

Key Characteristics

- One SharePoint list per plant
- Based on the approved **Prepayment Item Content Type**
- Preconfigured columns, validations, and default values
- Standard views:
 - **Pending** (active, editable items)

- **Processed** (locked, read-only items)

Why it matters

- Prevents cross-plant visibility
- Simplifies security
- Ensures consistent data structure across all plants

2. Plant Master List

Purpose

Acts as the **configuration and orchestration layer** for the entire solution.

What it stores

- Plant identifier
- Associated Central Submissions list name
- Associated plant security group

How it's used

- Drives the Power Automate consolidation dynamically
- Eliminates hardcoded plant logic
- Enables onboarding new plants by adding a single row

Why it matters

- Makes the solution scalable and future-proof
- Reduces maintenance and risk

3. Power Automate Consolidation Flow

Purpose

Automatically consolidates plant-level Central Submissionss into a centralized master dataset.

Core logic

- Reads all active plants from the Plant Master List
- Retrieves unprocessed items from each plant list
- Creates corresponding entries in the master list
- Marks source items as **Processed** (read-only)

Why it matters

- Removes manual consolidation
- Reduces errors and duplicate entries
- Creates a single source of truth for Finance

4. Security Groups

Purpose

Ensure users can **only do what they are supposed to do**, and nothing more.

Key design

- Dedicated plant security groups ([PlantCode] Members)
- Permissions layered as:
 - Read at site and library level
 - Contribute (No Views No Versions) at item or Document Set level

Why it matters

- Protects list structure and views
- Prevents unauthorized access or edits
- Supports audit and compliance requirements

5. Plant Template Page & Navigation

Purpose

Provide a **consistent, user-friendly entry point** for each plant.

What it includes

- Link to the plant's Central Submissions list
- Contextual guidance and instructions
- Standard layout reused across all plants

Why it matters

- Improves user adoption
- Reduces training effort
- Ensures a uniform experience across the UK Region
